

BUSINESS PITCH DECK

DELEGO WALLET

TEAM NAME : THE OVERFIT AVENGERS
DOMAIN : PUBLIC GOODS

PROBLEM

Crypto wallets do not provide a safe way to share limited access with others. Users must either share private keys or give up control of their funds, which creates security risks and makes real-world and enterprise use cases difficult.

- Non-custodial smart wallet where ownership always stays with the user
- Enables safe delegation of limited wallet access without sharing private keys
- Uses smart contracts to enforce permissions and spending limits
- Supports real-world use cases such as family, employee, and DAO payments
- Improves wallet security and encourages safe crypto adoption

MARKET SIZE AND OPPORTUNITY

- Operates in the Web3 and digital wallet industry
- Targets individual users, businesses, and DAOs
- 100M+ global wallet users
- Digital Wallet usage is rapidly growing at 20 – 30% annually
- 40% + need for shared and controlled wallet access
- High demand for secure, non-custodial wallet solutions

TRACTION

- Growing adoption of digital wallets and Web3 applications
- Increasing demand for secure and shared wallet access
- Rising use of wallets in enterprises, DAOs, and teams
- Strong market need for non-custodial and secure solutions
- High potential for long-term growth as real-world use expands

COMPETITION

- Existing wallets support only single-user access or require full key sharing
- Custodial platforms offer shared access but remove user ownership and control
- Multisig wallets add complexity and are not user-friendly for daily use
- **Delego enables limited, permission-based access without sharing private keys**
- **Delego remains fully non-custodial while offering flexibility and control**

FINANCIALS

- Smart wallet creation: **one-time fee of \$1–\$5 per account**
- Small commission from **merchant-based transactions** (future rollout)
- **NFC-based contactless on-chain payments** (future rollout)
- **Premium features available via subscription** (future rollout)
